#Languages

Polish English

#Skills

JavaScript/TypeScript Next.js
React React Native Electron
HTML CSS Tailwind CSS
Styled-Components Express.js
Node PostgreSQL Firestore
Git Figma

#Projects

Conoder

This project is a prototype of a code presentation tool that allows users to arrange and connect nodes to quickly create step by step code presentations.

Figma: SVG to React

SVG to React Figma plugin is an easy way to convert multiple SVG files to React components at once. The plugin utilises SVGR for the transformation process and SVGO for optimising the SVG files. The conversion takes place on a serverless function hosted on Vercel. The plugin allows users to preview the code for each converted SVG, set a custom name for it, individually copy or download the file/files.

Just Another Timer

J.A.T is my take on a timer app where each timer is made up of a series of steps that are completed in a specified order. Each step can have a title (text) and/or a description (markdown). The state of the timer is preserved even when the browser is closed and can be shared through a link or saved to the browser's local storage. The app also includes a basic stopwatch.

#About me

I am a web developer from Poland who enjoys building applications that find use in the daily lives' of people.

#Experience

Full-Stack Developer

Present

- Created an application for scheduling visits with a specific dentist using React, Electron.js, TailwindCSS, and Firebase which includes:
  - Developed a system for the dentist to easily create and manage patient records, including their appointment history and procedures performed
  - Implemented a panel for the dentist to use for scheduling and managing appointments for patients. This included features such as the ability to view their schedule, add or remove appointments, and make any necessary changes to existing appointments.
  - Created a system for the dentist to accurately document procedures performed on patients during appointments, as well as plan any further work that may be needed
  - Integrated an SMS API (serwersms.pl) that sends notifications to patients via text message for scheduled, cancelled, or rescheduled visits, as well as a reminder the day before the appointment
  - Worked closely with the dentist on creation and improvement of the scheduling app

Full-Stack Developer at STREBER SOFT

June 2021 — May 2022 (Poland, Remote)

- Involved in the development of an enterprise resource planning (ERP) system for a company that specializes in plastic processing
  - Participated in the creation of a web application for system administration, which was built using Next.js and Typescript
  - Created a new mobile application in React Native for quality control of manufactured products, and maintained an existing one
  - Created several desktop applications for managing the production of goods, using Electron.js, React, Typescript, and TailwindCSS
  - Automated generation of PDF and XLSX reports
  - Added additional functionality to an existing REST API built with JavaScript, Express.js
  - Worked with PostgreSQL database
  - I had the opportunity to work with the users of the system to improve the resource management solution and address any issues that arose.
- Participated in the development of a software-as-a-service (SaaS) application for scheduling medical appointments
  - Created a web application using Next.js, Typescript, and TailwindCss which includes:
    - A control panel that allows doctors to set their work schedule, breaks, and available appointment categories for patients to choose from during the scheduling process
    - A real-time view for doctors to see all scheduled appointments, along with options to preview visit information, cancel, or reschedule the appointments
    - A panel that allows patients to enter their information and schedule appointments
  - Developed a REST API using Typescript, Node.js, Express.js, and Knex
    - Implemented automation for sending email notifications to patients about their visit
    - Managed PostgreSQL database
